WORLD DISCOVERY

A Fish Swims With Fin Waves

An oarfish specimen in Vienna's Natural History Museum has a long, silver body.

An oarfish moves through water by waving its long back fin. Waves along the fin push the fish forward or backward. Its body does not need to swing from side to side.

CULTURE CORNER

A Basket Helped Separate Fine Flour For Cooking

A historic sifting basket made from plant fibers and dye.

Chokwe people pounded corn into flour. A basket helped separate the smallest bits of flour for cooking. This sifting basket was made before 1915. It is woven from plant fibers.
